Terminology Service Presumptions

Below is a list of presumptions around the terminology services layout that the OHIE-Terminology Services community is debating and cultivating.

This is a DRAFT list and is under construction.

The OHIE Terminology Service (TS) is assumed to be the source of truth for all terminology, nomenclature, and coded data within the OpenHIE shared health record. It will play a central role in terminology standardization and implementation throughout the HIE. However, it is only one component of the several components that comprise the OpenHIE. There are various ways the other components could interact with the TS. Here are some areas that the OHIE-Terminology Services community has been discussing.

Please note that the Google Doc below can be used to add comments/feedback for discussion. Access the live document via this link.
