

Country HIE Profiles

The goal of this section of the wiki is to capture profiles shared by OpenHIE community members as to the state of country activities, and in turn regional activities, related to health information exchange. Information below is **not** endorsed by countries but is captured through community conversations at different time. While it may not be perfect the intent is to help provide an insight as to where OpenHIE believes countries are at in their journey to implement HIE components. Community members are welcome to make additions / changes / updates. You must be logged in to add make any revisions and all revisions are being tracked.
