2014-01-09 OHIE-FR Meeting

When: 01/09/2014 at 11:00 AM EDT

Where: Google Hangout

Participants: Bob Jolliffe, Carl Leitner, Martin Verzilli, Eduardo Jezierski, Scott Teesdale

Recorded Video: http://www.youtube.com/watch?v=bfs3uBRqNsI

Agenda:

1. Coordinate IHE - CSD Connect-a-thon Preparations
2. Generate and Discuss 2014 Goals re: FRED API and Facility Registry Implementations
3. AOB? Feel free to join and suggest it as an agenda item.

Notes:

Services in CSD

- The service directory entry just shows OIDs
- So what do they mean?
- Services are basically code lists with a coded type underneath
- Then you go to the code list to see what they are.
- This allows multiple code sets to be shared.

What are we actually going to do at the connectathon?

- Choreograph a bit
- We have IP addresses and tables.
- What is going to happen? Watch the video from IHE prep materials to learn more...
- How will the bootstrapping occur? Pull Facilities from RM for example?
    - We will have to use the dataset with a list of facilities that they expect us to be providing. Those are the data points where we need to be consistent.
    - We will confine ourselves to the sample data. No need to do more initially
    - Link

Are we planning to carry a couple virtual machines?

- After a test run it is possible that there will be an info-man with some level of data in it? Do you start with a new info-man or re-use the old one?
    - It can handle multiple directories.   It is easy enough to have 2 info-mans
    - Perhaps could be helpful, will determine during a dry run

Moving Forward with Test Data

- Lets get these in place in RM so that they can start pulling these things
- Service Directory: https://github.com/his-interop/openinfoman/tree/master/resources/service_directories
- Carl is putting this data into the

Is there an example test suite for the connect-a-thon?

- We can ask Lyn
- They will probably ask us to create 1-2 facilities with these properties

Can we do a dry run online?

- Lets try to do it together…will help to identify issues
- Before the next OHIE-FR meeting.
- Scott will send out details to participants

Risks for CSD?

- CSD is still a malleable thing?
    - The changes for the SOAP request we will
    - They are flexible so it is ok if we make a change?
    - It is currently a trial implementation and not a final text
- They do have Profiles that have been in trial implementation for 3 years that have architecture around it
    - Doesn't think the preliminary fact of text will hold up architecture considerations
- CP for Names
    - Pending need
    - Change the name
    - Seems that the sample
- Contact Points Included?
    - Lyn has the person data

- You can also link to provider OID and not provide that data?
- Does Not appear we are testing against it
- Unfortunate but you might not know who this person really is
- We have people but we don't have provider IDs

Other Facility Registry - Potential Goals

- We wanted to send a community survey to get feedback
- Demonstration days - groups and teams
- Share lessons learned from the field
- End of March to April … lets take all the lessons learned and give a rev to whatever APIs
- Other Suggestions or Thoughts for the FR community moving forward?
