

# Current Architecture ("in vitro")

**Objective: Describe the current state of the evolving OpenHIE architecture; develop a collective understanding of progress and current state.**

While each component community has been actively working to evolve their architecture, many outside the slipstream of each group's individual activity may be unaware of that progress. Each community lead will present the current state of their component's architecture. This information will help the OpenHIE community to understand the changes that have been made since Rwanda, and will help set the stage for the "future state" discussion.
