# The uses of discrete data in the SHR

The following describes the proposed uses the discrete data stored in the SHR:

- For clinical decisions support
  - Perhaps could use a workflow similar to Send health worker alert workflow
- Creation of medical summaries for a patient
  - This could be a feature of the SHR where as new documents are saved, medical summary documents can be produced and registered with the SHR
- Aggregation of data for reporting purposes
  - See Aggregate data from the SHR
