

Sample CDA document used for the initial development of the SHR CDA Handler module

Given below is the sample CDA document to be used for the initial development of the SHR CDA Handler module.

This module was generated by converting a sample hl7 message with two OBR segments (each with two OBX segments) into a CDA document.

Note that while this document purports to be a Aphp document, it is not yet fully configured as such, but will be iteratively modified as our work progresses.

```
