

# Sample APHP Document used for initial testing of the SHR CDA Handler

Shown below is the sample Antepartum History and Physical (APHP) document used for the testing of the SHR CDA handler. Note that for current purposes, this document expands only on the 'HISTORY OF PREGNANCIES' section. This document was prepared largely thanks to assistance provided by [Jeremy Keiper](#).

As discussed previously, this document, when translated into the OpenMRS data model, will be represented as a single encounter. Therefore, the 'HISTORY OF PREGNANCIES' section will be represented using an Obs Group, while the observations listed under this component will be represented via Obs.

The observations recorded under the HISTORY OF PREGNANCIES section represent numerical, date, string and concept data types.

This document will be revised as further amendments/improvements are made. At this time, it validates successfully with no errors and several warnings.
