

Events

Community Meeting

Annual events intended to directly support countries as they grapple with the many challenges inherent in driving large-scale health information-sharing architectures. We invite government officials, and the implementers and developers seeking to support them, to participate in this event. These events provide a unique opportunity for implementers to collaborate and improve their knowledge of OpenHIE, share examples of how OpenHIE models can be practically used, and to propose new priorities. As well, government leaders can come together and learn from each other about approaches to designing interoperable solutions as well as governance frameworks that have been applied for health system information exchange.

Architecture Summit

Annual event to talk about focus for the coming years as it relates to OpenHIE's framework, topics around architecture, workflows, specification, testing etc. This provides an open space for people to talk about OpenHIE's technical roadmap for the coming year and engage with OpenHIE's [Architecture Review Board](#).

Academy Live

Global Event Calendar: If you are aware of other global events taking place now or in the future please add them to this list. This is **NOT** a complete list but we hope sharing information about events of interest to the HIE community will help people to get involved in important conversations and collaborate on projects.
